[Авторизация в SQUID через Kerberos на pfSense](#)

Proxy server: General settings

- General
- Upstream Proxy
- Cache Mgmt
- Access Control
- Traffic Mgmt
- Auth Settings
- Local Users

Proxy interface

WORLDCALL
LAN
VISIONEAST
loopback

The interface(s) the proxy server will bind to.

Allow users on interface

If this field is checked, the users connected to the interface selected in the 'Proxy interface' field will be allowed to use the proxy, i.e., there will be no need to add the interface's subnet to the list of allowed subnets. This is just a shortcut.

Transparent proxy

If transparent mode is enabled, all requests for destination port 80 will be forwarded to the proxy server without any additional configuration necessary.

Bypass proxy for Private Address Space (RFC 1918) destination

Do not forward traffic to Private Address Space (RFC 1918) **destination** through the proxy server but directly through the firewall.

Bypass proxy for these source IPs

192.168.109;192.168.0.156;192.168.0.122;192.168.0.144;192.168.0.205;192.:

Do not forward traffic from these **source** IPs, CIDR nets, hostnames, or aliases through the proxy server but directly through the firewall. Separate by semi-colons (;). [Applies only to transparent mode]

The screenshot shows the pfSense web interface for configuring the Proxy server. The top navigation bar includes System, Interfaces, Firewall, Services, VPN, Status, Diagnostics, and Help. The main heading is "Proxy server: General settings". Below this, there are several tabs: General, Upstream Proxy, Cache Mgmt, Access Control, Traffic Mgmt, Auth Settings, and Local Users. The "General" tab is selected. The configuration options are as follows:

- Proxy interface:** A dropdown menu showing "WORLDCALL", "LAN" (selected), "VISIONEAST", and "loopback". Below it, the text reads: "The interface(s) the proxy server will bind to."
- Allow users on interface:** A checkbox that is checked. Below it, the text reads: "If this field is checked, the users connected to the interface selected in the 'Proxy interface' field will be allowed to use the proxy, i.e., there will be no need to add the interface's subnet to the list of allowed subnets. This is just a shortcut."
- Transparent proxy:** A checkbox that is checked. Below it, the text reads: "If transparent mode is enabled, all requests for destination port 80 will be forwarded to the proxy server without any additional configuration necessary."
- Bypass proxy for Private Address Space (RFC 1918) destination:** A checkbox that is unchecked. Below it, the text reads: "Do not forward traffic to Private Address Space (RFC 1918) **destination** through the proxy server but directly through the firewall."
- Bypass proxy for these source IPs:** A text input field containing "192.168.109;192.168.0.156;192.168.0.122;192.168.0.144;192.168.0.205;192.". Below it, the text reads: "Do not forward traffic from these **source** IPs, CIDR nets, hostnames, or aliases through the proxy server but directly through the firewall. Separate by semi-colons (;). [Applies only to transparent mode]"
